Victory Bedford

Frontend Developer — React Native & Web

bedford490@gmail.com +234 911 022 1463 linkedin.com/in/victory-bedford github.com/victory1069

Frontend developer building for mobile and web. I ship whole products rather than screens: I take a design, build the interface, wire up the API, and stand up the backend I need to make it work. Recent builds include an AI investment-readiness platform, an HR product with a mobile employee app and a web admin, and a live registration portal taking real payments. Computer science degree, two years shipping in production at a payments company and a securities firm, and a design background that means I usually catch an interface problem before a designer has to point at it.

EXPERIENCE

Software Engineer (NYSC) · Interswitch Group Nigeria

Mar 2025 – Mar 2026 · Lagos

- Built and shipped product features at one of Nigeria's largest payments companies, working to release cycles alongside product, design and QA.
- Owned interface work from Figma handoff through to production, catching design gaps and edge cases before they reached users.
- Worked across the stack where features called for it, integrating frontend against internal services and APIs.

Frontend Developer / Systems Engineering Intern · Meristem Securities

Aug – Nov 2024 · Lagos

- Built frontend tools that replaced manual internal workflows with usable interfaces for stakeholders across the business.
- Scoped and delivered assigned projects end to end, from requirements through release.

SELECTED PROJECTS

FundReady AI — investment readiness platform

Next.js · TypeScript · React Native · Node · Render · GitHub Actions | fundreadyai.vercel.app · github.com/gtextsoft/FundReady-AI

- Built the product surface for an AI audit engine that runs 70+ investment checks across eight business dimensions and returns a scored, explainable report with a 90-day action plan.
- Designed for two user types in one product: founders running audits, and investors browsing gated dealflow summaries.
- Made evidence-weighted scoring legible at a glance. Confidence levels, contradictions and blocking risks surface on the report card instead of being buried in prose.
- Set up the repo across mobile, web and backend with CI and secret scanning, deploying to Vercel and Render.

QuantiHR — HR platform: mobile employee app and web admin IN BUILD

TypeScript monorepo · React Native · shared packages · Render | github.com/victory1069/quantihr

– Built the mobile employee app inside a TypeScript monorepo with a shared package, so types and business rules stay identical across the app and the admin web surface instead of drifting apart.

Summer Tech & Creative Leadership Training — registration portal

React 19 · Vite · Tailwind CSS 4 · Framer Motion · React Router · Paystack | safsummercamp.vercel.app · github.com/gtextsoft/SAF-TEEN-SUMMER

– Marketing site and paid registration portal for a Stephen Akintayo Foundation programme, live and taking a ₦200,000 fee per registrant.

– Sequenced the flow so registration details are captured before checkout ever opens, meaning nobody can pay without being recorded. The guardian email is passed to Paystack read-only so receipts reconcile against submissions on a single key.

– Deliberately kept the amount out of the payment URL, closing the obvious tampering route.

– Accessible by construction: labelled fields with aria-invalid and aria-describedby, focus jumps to the first invalid field on submit, skip-to-content link, and all motion disabled under prefers-reduced-motion.

– Drove every piece of copy from a single data module and the palette from CSS theme tokens, so the client can re-word and re-skin the site without touching a component.

STACK

MOBILE	React Native · Expo
FRONTEND	React 19 · TypeScript · Next.js · Vite · Tailwind CSS · Framer Motion · React Router
BACKEND & INFRA	Node.js · REST APIs · Render · Vercel · GitHub Actions · monorepos with shared packages
INTEGRATIONS	Paystack
PRACTICE	Accessible markup and keyboard behaviour · Secret scanning in CI · AI-assisted development (Claude, Cursor) for backend and rapid prototyping
DESIGN	UI/UX · Figma · Visual design and graphics

EDUCATION

BSc (Hons.) Computer Science · Covenant University 2024

Karmel College — Graduated with Distinction · Best JAMB student of the set 2021

VOLUNTEER EXPERIENCE

Public Relations Officer · NACOS, Covenant University 2023 – 2024

Owned external communications for the largest student body in the faculty. I planned campaigns around events and programmes, ran the publishing calendar, and coordinated the design, copy and event teams so everything landed on time and sounded like it came from the same organisation. Most of the work was keeping several groups of volunteers pointed at the same deadline.

Public Relations Officer · Covenant University Data Science Club 2022 – 2024

Built visibility for the club's programming through a consistent brand voice, event promotion and outreach to partners and speakers. I handled the club's public-facing presence end to end, from writing the announcements to designing what went with them.

Still Graphics Editor · SEALD Office, Covenant University 2024

Led still design output for a university office. I set the visual standards, managed the intake of design requests from across the office, and turned work around against fixed deadlines. Working to somebody else's brief on a schedule is where most of my interface instincts come from.

Media Team · Covenant University Chaplaincy 2021 – 2024

Production support across live services and weekly events: capture, editing and delivery of media on a recurring cycle. Live production teaches you to plan for the thing going wrong, which is a habit that carried over into how I build software.
